NEW SERIES OF SDV5 COMMERCIAL SYSTEMS

New outdoor units of SDV5 series are equipped with an EVI compressor that allows heating to -25°C of ambient temperature. Individual units of this series have capacity from 25 to 90 kW. In case a higher capacity is required, it's possible to connect up to 3 modular units with maximum capacity of 270 kW.

New SDV5 indoor units use a 7-speed fan for getting better comfort and lower noise level. These units provide a possibility to set appropriate temperature in $0,5^{\circ}\text{C}$ steps for a more precise control and newly allow to switch the display off. SDV5 controllers are provided as optional accessories which you choose according to particular project demand. New central controllers have a touch screen with the possibility of setting a weekly timer. In case of a remote control, you can choose the control via internet or mobile application.
