### SCMI-01X

Dear Business Partners,

We have updated the SCMI-01 communication module, now with model code SCMI-01X, which allows you to control a separate outdoor unit ASGE-xxAIN or ASGE-xxAIN-3 WK from the UNI DC INVERTER series with the R-410A refrigerant.

Allows settings such as autonomous cooling control (evaporation temperature), slave unit (0-10V) for both cooling and heating. The novelty is in autonomous temperature control for cooling and heating (as a slave unit) where the evaporation temperature limits not  $-10^{\circ}\text{C}$ , but after the updated version is a limit of  $-30^{\circ}\text{C}$ .

The SCMI-01X opens up many new possibilities for additional applications.
