Uni Split series

Direction of air outlet

A shape and a motion of guide louvers of floor-ceiling units (ASF-xxBI) was enhanced in order to achieve better cooling performance. The louvers can now redirect the air right under the ceiling, so the cold air is able to reach the far corners of the room.

Wi-Fi module

Now all indoor units of UNI SPLIT series can be equipped with Wi-Fi module. "EWPE Smart" app is used for long-range control. It is the same app which SINCLAIR residential air conditioners use for Wi-Fi control. The new Wi-Fi module for UNI SPLIT series is called SWM-03 and will be available during Autumn. The module is sold as optional accessories.

Wired controller SWC-03

UNI SPLIT units also adapt new wired controller SWC-03. This new controller offers more user-friendly interface and modern design. However its biggest feature is weekly timer. SWC-03 will be available during Autumn as optional accessories. XK117 wired controller is standard equipment of indoor units.
