G2S-T

GSM module

G2S-T module G2S-T module is used for remote monitoring of room temperature. When a set temperature is exceeded, the module sends information to user's mobile phone. Hence the module has to be equipped with a mini SIM card in order to secure the operation. G2S-T is a stand-alone device, there is no connection between the module and the air conditioner itself. Therefore you can use our G2S-T module for all kinds of applications including installations with devices of other brands.

Included:

12V Power supply, backup battery, antenna, mini USB cable, 2pcs of temperature sensors, shortened user manual

First settings can be done by a universal program **USBCommunicator**, which can be downloaded on our [WEB site](#).
