SELECTION SOFTWARE 4.0 INCLUDES NEW SDV5 UNITS AND COTROLLERS

New design program Selection software 4.0 contains new outdoor and indoor units from SDV5 series with controllers and BMS gateways.

Additionaly, you are able to choose requested temperature in room and program will calculate total and sensible capacity in cooling and heating.

New indoor units SDV5 don't have any controllers in package and you need to select the right one based on project requests.

For external evaporator you can use AHU kit which newly allows continuous control via 0-10V which is related to outdoor capacity 0-100%.

Output of this program provides correct selection of units, refnets and quantity of refrigerant which needs to be added based on liquid pipe length.

Proposal from this software can be exported to Microsoft Word file.
